Subject: [Non-DoD Source] RE: Navy's consolidated proposal on *Tuberolabium guamense* and *Hypolimnast octocula marianensis* (Mariana eight-spot butterfly) for the Marine Corps Relocation to Guam

Joe -

Thanks for the follow up and the call. I wasn't able to call back as I was talking waterbirds with about 30 people the entire day (including lunch) with the exception of the good calls I had with Dan and the MACS team. I appear to have an email from Leilani with this same information so I guess she had the info pointed out by Coralie as well. I think the whole exchange is indicative of how hard and fast Leilani is trying to work so apologies if I caused any stir but still think it is a good example of how information overload is starting to be felt in staff energy.

I'm glad you have the comments on the initial 120 page effort. We know the main section on the butterflies and orchid are still outstanding (that's what Leilani is working on and hence the email exchange) but since I hadn't had time to read the 120 pages, I wanted to caveat any reference that might have been made to the orchids and butterflies as that information would have dated from before your submittal last week.

Best -
Mary

Mary,

I share with your concern over the complexity of this analysis. A lot has happened in the 14 months since we originally requested to conference - not the least of which was adding new species as we found them in pre-construction surveys and even finding ~7,300 *Tuberolabium guamense*! Your idea to capture all of the updates on *Tuberolabium guamense* and *Hypolimnast octocula marianensis* and submit it in a single document (submitted last week) will undoubtedly help. That was the document with the sentence that Leilani had a question with and ironically the answer was in the second half of the sentence. I highlighted a copy for you.

I plan to get you the first run comments on the initial 120 page submission within the next day. Since the "species account and environmental baseline" in the preliminary draft biological opinion that you provided to us did not include the orchids and 8-spot butterfly, I may have some additional comments in that section.

Joe

Dear Joe and Dan –

I just wanted you to be aware that this is some of the problem we face with finalizing the draft BO and why your team's review of the first 120 or so pages would be very helpful. Since we don't have an actual BA to work from, Leilani has to patch together information from a variety of sources and check if some of them don't match up. All that takes time and has to be done since we will have others looking at some of the same information and asking questions if data doesn't seem to match up.

I don't need you to do anything about this, I just offer it as an example of what causes some of the frustrating delays for all of us.

Dan – Looking forward to talking to you in a bit.

Best –

Mary

FYI, please see below.

Their most current write up for the orchid includes potentially incorrect information. I may end up using the actual references rather than their write up.

Thanks.

Coralie,

The attached write up for Tuberolabium guamense states per the University of Guam surveys, there are 544 T. guamense within the HMU at AAFB. I looked at the UOG plant report and it states that there are 251 T. guamense in HMU. Can you please clarify? I am not sure why there is a discrepancy of almost 300 orchids. Is there another UOG survey report? Please let me know by tomorrow morning (ChSt). I am sending this section to Jackie tomorrow

afternoon, so I will use the 251 if I don't get a response from you by tomorrow morning.

Thanks,
Leilani

Mary,
Please find attached the documents that you requested earlier this week. I appreciate you and your staff's dedicated efforts to complete this consultation.

Please let me know if you have any questions.
Joe
